Follow these steps to connect your phone to the battery using the *Bluetooth* monitoring system

Bluetooth Mobile app:
KINGOR BW Battery

Step 1: Power on the Battery

Ensure the BW Lithium battery is switched ON and has sufficient charge. Bluetooth functionality is only available when the battery is active.

Step 2: Position Your Phone

Remain within 1–5 metres of the battery to ensure a stable Bluetooth connection.

[Step 3: Install the Battery Monitoring App](#)

Download the correct battery monitoring application by:

- Scanning the QR code on the battery label OR
- Searching for the recommended BMS app in the Apple App Store or Google Play Store: **KINGOR BW Battery**.

⚠ Important: Please ensure you only use the application specified for your specific battery model.

[Step 4: Enable Bluetooth](#)

Turn Bluetooth ON in your phone settings.

Do not pair the battery directly from the phone's Bluetooth menu unless instructed by the app.

[Step 5: Open the App and Scan](#)

Launch the app and allow all required permissions (Bluetooth and location). Select Scan, Search Device or Connect within the app

[Step 6: Connect to the Battery](#)

Select the battery from the list of available devices.

If a password is required, use the default password provided (commonly 000000 or 123456).

Step 7: Confirm Connection

Once connected, the app will display real-time battery information such as:

- State of charge
- Voltage
- Current
- Battery status

This confirms a successful Bluetooth connection.

Notes:

- Only one mobile device can connect to the battery at a time.
- If connection fails, ensure the battery is powered on, move closer, restart the app or restart your phone.
